Overview

Horizon Clinical Research is located in the East Valley of the Phoenix metro area. We are affiliated with Desert View Family Medicine, a primary care group with 7 Family Physicians and 3 Physician Assistants. The group treats over 60,000 patients per year.

Our site is the continuation of Casa Blanca Clinical Research, with a combined experience of 50+ trials over the past 8 years. Our focus is Primary Care (Phase II-IV outpatient), with the Medical Director and Desert View physicians acting as Investigators. We also have specialty capabilities in multiple areas.

Clinical Research Experience

Our well-trained, friendly staff maintains solid relationships with Sponsors and CRO's, and we receive consistently positive feedback from our monitors, who always enjoy working with our site. We have worked with the CRO's and Sponsors as listed below:

- | | | |
|----------------------------|-------------------------|---------------------|

Facility Description

Horizon Clinical Research is an outpatient facility located within a large 10-provider family practice clinic. We have lab drawing with access to local lab, EKG, crash cart, oxygen, -20° freezer, private offices, locked drug storage, numerous exam rooms, and computer/remote data entry capability. We use Central IRB's almost exclusively.

Patient Demographics

The East Valley region of Phoenix has a population of over 1 million people, including a significant percentage of seniors, who have been well motivated to participate in clinical research. Many of our participants come from the patients that are seen in the adjoining family practice. We also use IRB approved ads and flyers to recruit subjects from the community.
